## DESCRIZIONE DEL PRODOTTO

# W LINE PRO AIRLESS DIAPHRAGM LINE MARKER, GAS ENGINE, COMPLETE WITH STANDARD KIT.

W LINE-PRO is an airless diaphragm, self-contained, gas engine, very strong and handy pump. With W LINE-PRO is very easy to mark lines for parkings, curves, cycles track, etc. This linemarker is used for all kind of traffic signs jobs. When required, W LINE-PRO becomes an airless pump for spraying walls, doors, vertical safety signs, tools, etc

W LINE-PRO is ideal both in the industry and local governments, who can handle many different jobs with one only unit.

Professional contractors, property managers and maintenance personnel aren't interested in complicated machines: they want to get the job done quickly and done right. Serious contractors, maintenance managers and athletic organizations rely on WIT because WIT offers them a versatile, dependable solution for every application – from municipal parking lots and athletic fields to airport runways and roads.

### Standard equipment set-up includes:

- Tubo HP dia. 1/4 – mt. 10
- Paint suction system
- Airless gun
- Self-cleaning nozzle cpl.

### Applications

Acrylics, Rustproofing, Bituminous, Emulsions, Fixatives, Primers, Primers, Paints, Water-based paints, Primers, Enamels, Paints

### Application's fields

– Parking lines – Industrial signs – Interior and exterior painting – Guard-rail painting

It is possible on request to mount the Bead Spreader Kit for the reflective effect with the bead spreader gun.

Doppia pistola

Kit di distribuzione perline

Kit di distribuzione perline

The bead distributor kit is designed for spreading reflective beads on parking lines, intersections, curves, bike paths, etc. The kit consists of a 6 l tank, a 4 distributor, fittings, hoses and everything necessary to operate. This is a gravity system that requires neither air nor other energy resources. The dispenser is mounted directly behind the spray gun. When the spray gun is in operation, the powder kit distributor opens simultaneously. The glass powder is deposited on the sprayed line while still damp, which ensures a very effective grip. The amount of powder to be deposited on the sprayed line is easily adjusted using a screwdriver.
